

Job Specification

Job Title: Industrial Refrigeration Engineer

Job purpose outline:

As a Refrigeration Engineer you will be responsible for maintaining, servicing and repairing our client's industrial refrigeration units. You will be covering the whole of the UK, but the majority of your work will be in the North and North West areas. This role would suit someone with experience in dealing with industrial refrigeration equipment, an NVQ (or equivalent) in refrigeration and air conditioning and an ammonia safe handling certificate, looking to further their career with an expanding company.

In addition to planned calls, you will attend reactive and out of hours calls as required on a rota basis. You will also be tasked with training apprentice engineers and providing recommendations to the projects team on changes for cost savings and performance improvements.

Location: – Birkenhead, Wirral

Negotiable (dependant on experience) Plus Company Car, Overtime, 5 Weeks Holiday, Optional Stake Holder Pension

Outline duties:

1. Complete planned preventative maintenance tasks on air conditioning units
2. Complete planned and reactive service tasks.
3. Attend out-of-hours calls as when the call out roster dictates.
4. Provide recommendations to the service manager on changes for cost savings and performance improvements.
5. Complete project works as instructed by the installations manager.
6. Provide Refrigeration expertise to the client.
7. Perform testing and engineering calculations to predict and measure A/C performance.
8. Working away
